

Amendments to the Specification:

Please amend the paragraph beginning on page 7, at line 3, as follows:

The base wall 30 includes a separator bar 50 that extends between and separates the two vent openings 36 and 38. The separator bar 50 has a first end portion or upper end portion 52 located between the upper end 40 of the first vent opening 36 and the upper end 44 of the second vent opening 38. A second end portion or lower end portion 54 of the separator bar is located between the lower end 42 of the first vent opening 36 and the lower end 46 of the second vent opening 38. An intermediate portion 56 of the separator bar 50 is disposed between the upper end portion 52 and the lower end portion 54.

Please amend the paragraph beginning on page 7, at line 14, as follows:

The intermediate portion 54 56 of the separator bar 50 is narrower than the upper and lower end portions 52 and 54. As a result, each one of the two vent openings 36 and 38 is wider in the middle than at its upper and lower ends. The flap engagement surface 32 of the base wall 30 of the housing 20 has a first radius of curvature about an axis extending generally perpendicular to the length of the separator bar 50.
